Site down? We'll get it back online.

We recover lost websites, prepare emergency migration and speed up loading with or without a VPN.

01 /

Recover the site

Your website is down

02 /

Set up a backup

Your provider was hit or breached

03 /

Speed up the site

Your site is slow or fails on VPN

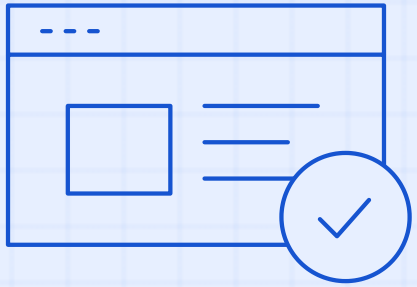

01 / YOUR WEBSITE IS DOWN

We'll recover your lost website and launch it on a new host.

Lost access to the old server and have no backup? We'll find surviving pages and rebuild your site.

- Recover copy, images, page structure and design from available materials and web archives.
- Reconnect forms and essential integrations. Check that your site can receive enquiries again.
- Deploy with a new provider and set up the domain, HTTPS and backups.

HTTP / ONLINE

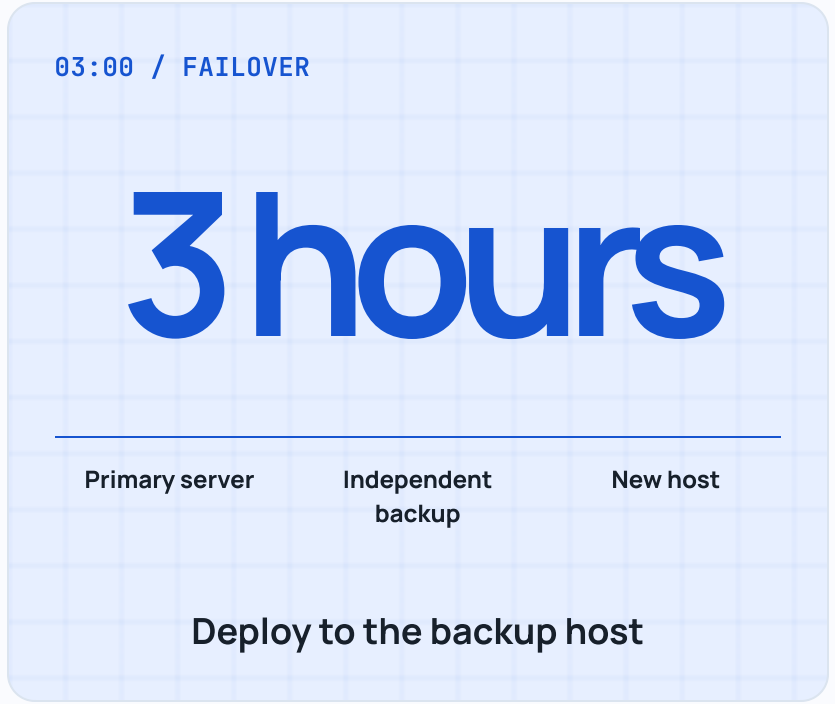

Site back online

02 / YOUR PROVIDER WAS HIT OR BREACHED

We'll prepare your site and server for a three-hour migration.

Keep a copy with a separate provider. If the primary host goes down, we'll deploy to the backup and switch your domain.

- Automate backups of the site, database and configuration. Encrypt the off-site copy and protect it from deletion.
- Test recovery on a compatible server and prepare the domain and DNS switch.
- Monitor uptime and backups. Keep a standby server ready for critical projects.

03 / YOUR SITE IS SLOW OR FAILS ON VPN

We'll speed up your site with or without a VPN.

We'll find what slows your site down and which files fail to reach visitors. Then we'll fix the bottlenecks and show the difference in numbers.

- Test loading from your target cities and networks, both on and off VPN.
- Optimise the server, database, cache and heavy files. Remove slow external dependencies.
- Test the mobile site, forms and key actions. Compare measurements before and after.

NEXT STEP

Send us your website URL.

Tell us what is happening with your site. We'll discuss your situation and propose a first step.
